Polaris' AMC Tester V1.0.0 provides comprehensive Conformance Test Solutions compliant with PICMG specification AMC.0 R2.0

Polaris Networks' AMC Tester aids Telecom Equipment Manufacturers and System Integrators to test Hardware Platform Management Software

Lexington, Massachusetts, August 14, 2008 - Polaris Networks, a trusted name in the Networking Protocol Test Tools business, launched its new version of the AMC Tester today. This automated test suite is designed specifically for vendors to test Hardware Platform Management software development for AMC and is fully compliant with PICMG specification AMC.0 R2.0. The tester is ideally suited to help vendors meet the needs of certification and interoperability.

The AMC Tester, which complements Polaris' existing range of ATCA and MicroTCA testers, is now commercially available. On the occasion of this release, Sujit Purkayastha, VP, Business Development, Polaris Networks stated, "Telecom companies can now use a single vendor to provide test solutions for all their testing needs related to ATCA, MicroTCA and AMC. These test tools have been developed after close consultation with CP-TA and where applicable, they conform to the published certification requirements".

The current version of the AMC Tester has been upgraded, and features more than 60 test scripts for testing mandatory carrier requirements and AMC management implementations. The tester has an easy-to-use Windows interface and complete source codes for test scripts are available, which helps users customize tests according to their requirements. The built-in Miniscope Protocol Analyzer aids the debugging process during system development and integration, reducing the time and resources spent, significantly.

About Polaris Networks

Polaris Networks plays critical roles in various standards bodies (EPCglobal, WiMAX Forum, ZigBee Alliance, CP-TA etc.) in terms of creating interoperability guidelines and developing test tools to aid manufacturers and service providers meet compliance requirements. Located in the Boston area with a R&D center in India, Polaris also provides support services with its competent and professional help from outside for software development to companies looking to augment their own resources and bring new products and enhancements to the market quickly.
